Ribbon Print  
**EXPRESS**

**\$1399 +gst**

The Ribbon Print Express printer offers 300dpi resolution and larger memory for high quality printing. The high print resolution is perfect for producing text and graphics for applications such as clothing labels, photos on hospital I.D. bracelets, and labels for small retail items such as jewelry.

The RP Express holds a 300M long foil for large printing demands and for less frequent foil changes. Loading media and ribbons is quick and easy. A paper sensor system supports diverse media and you can select foil as ink-side in or ink-side out. Four auto-calibration modes deliver more precise printing. The printer provides multiple communication interfaces including parallel, RS-232, and USB, and optional Ethernet

The RP Express prints at a speed of 4ips and onto media of up to 124cm in length. Standard memory includes 8MB Flash and 8MB SDRAM. The printer's modular design simplifies maintenance. It supports 1D/GS1 Data bar, 2D/Composite codes, QR barcodes, and Windows TrueType font download. The CP-3140L provides high quality printing for applications that require enhanced printing of text and graphics. The new RP Express printers are space-saving, flexible, and deliver outstanding performance.

> Media Shaft Design for stabilizing paper

> Movable Reflective Sensor

> Center Fixed Transmissive Sensor

> External media stacker for 8.5" OD ribbon roll
